

Our solutions for the production period

Bridomat

Separate sex feeding

The unique, adjustable roller tube or a FIXGRILL™ prevents cockerels from eating together with the hens.

Unique feed management

The special trough shape minimizes feed waste.

A high transport capacity (30 m per minute - 98,5 f/m) prevents birds from eating during feed distribution and divides the trough into thousands of small feed compartments, preventing selective eating.

Birds per meter trough		13 – 15
Centimeter of trough per bird		13,3 - 15,4
Birds per feet trough		4 – 5,6
Inch of trough per bird		5,24 – 6,06
General & technical info		
Capacity per feed intake boot		700 kg/h
Maximum trough length	- circuit with 2 motors	up to 160 m
	- circuit with 3 motors	up to 300 m
	- circuit with 4 motors	up to 370 m
Roller tube: height regulation		from 40 to 50 mm (11 positions)
FIXGRILL™		45 mm width, 65 mm height
Suspension points		max. every 3 m
Max. pellet diameter		4 mm
